Kelvin Ajayi

Software Engineer | AI & Full-Stack

+234 814-131-6786 | kelvide7@gmail.com | linkedin.com/in/kelvin-ajayi | github.com/scryptwiz

Summary

Software engineer with 5+ years building production web, mobile, and AI products for teams in the US, Australia, India, and Nigeria. Designed and shipped a production RAG system as co-founder of Provolo, embedding a curated proposal and profile corpus in a vector database so LLM recommendations are grounded in real examples; the platform grew to 6,500+ active users. Also built 95% of an AI article generator. Pairs AI work with strong production engineering: cut a React Native app from 130MB+ to 63MB, took a media-heavy feed from ∼24 to a stable 60 FPS, and re-architected a fintech backend to cut operating costs by 90%. Owns features end to end, from API, data, and infrastructure to web and mobile clients, CI/CD, and QA.

Education

Ladoke Akintola University of Technology Oyo, Nigeria

Bachelor of Technology, Computer Science *Sept 2021 – Jun 2026*

- **Focus Areas:** AI Systems, Databases, Mobile, Blockchain

Technical Skills

AI/ML: RAG, Embeddings, Vector search (pgvector), OpenAI API, LangChain, LiteLLM, QLoRA
Languages: Python, TypeScript/JavaScript, Go, Rust, SQL
Frontend & Mobile: React, Next.js, React Native (Expo), Tailwind CSS, Framer Motion, Zustand, FlashList
Backend: Node.js, FastAPI, REST APIs, WebSockets, WebRTC, Webhooks, Supabase, Convex
Data: PostgreSQL, Redis, pgvector, Vector databases, MMKV
Cloud & DevOps: AWS, GCP, Docker, Kubernetes, VPS, GitHub Actions, EAS, CI/CD
Quality & Security: Unit, E2E, and API testing; authentication, authorization, webhook verification, email DNS security
Integrations: Polar, Dodo Payments, DHL/UPS APIs, Agora, Clerk, PostHog

Experience

Software Engineer Nov 2025 – Sept 2026

Omenai – art marketplace *Remote, USA*

- Owned the end-to-end artwork editing feature across API, web, and mobile, including role-based pricing logic for artists and galleries; used by 30–50 artists and a partner gallery
- Diagnosed and fixed a critical production bug in the third-party shipping rate calculation API within 30 minutes, unblocking a stalled $5K artwork order
- Refactored the media-heavy feed's component architecture and image rendering patterns, raising frame rate from ∼24–30 FPS to a stable 60 FPS with no jitter and noticeably faster load times
- Introduced the team's QA process across web and mobile (pre-deployment API testing, unit and end-to-end tests, behavioral testing), plus API and app security checks, shifting bug discovery from user complaints to pre-release detection
- Automated iOS/Android build and release pipelines with GitHub Actions and EAS, reducing manual work and build failures
- Built an AR artwork viewer and a museum-style gallery with accurate aspect-ratio rendering

Founding Engineer Aug 2025 – Aug 2026

*Provolo (*provolo.org*) – AI career optimization platform* *Remote*

- Designed and shipped the platform's RAG layer: embedded a curated proposal and profile corpus in a vector database so the LLM grounds proposal, profile, and resume recommendations in relevant real examples instead of generic output; indexed user data for fast lookups
- Led a 3-engineer team, 2 UI/UX designers, a security specialist; grew the platform to 6,500+ active users
- Owned the React frontend and most of the backend, including proposal, profile, and resume optimization flows and the Polar payment integration
- Closed attempts to bypass the subscription system with verified payment webhooks and server-side feature authorization checks
- Prevented account sharing by binding sessions to device IDs and limiting active devices per account

- Responded to a domain-spoofing phishing attempt flagged by our security specialist, fixing it immediately with DNS-level email protections

Lead Mobile App Engineer Mar 2025 – Jan 2026

Convose Ltd – social video and chat app *Remote, Australia*

- Led a 3-engineer mobile team, working with a backend engineer and a UI/UX designer, through a complete migration to the modern Expo ecosystem (React Native 0.72→0.81)
- Cut app size from 130MB+ to 63MB and improved startup time by removing legacy libraries, replacing AsyncStorage with MMKV, and replacing Redux/RxJS with Zustand
- Built and optimized realtime communication (video, voice calling, and chat) using Agora, WebSockets, and WebRTC
- Rebuilt chat lists with FlashList, sustaining smooth 60 FPS scrolling across thousands of messages
- Moved builds from local machines to cloud CI/CD (GitHub Actions + EAS), eliminating local build failures and enabling faster store submissions
- Established engineering standards, deployment workflows, and technical documentation for smoother asynchronous collaboration across time zones

Next.js Developer (Contract) Feb 2025 – Jun 2025

WebbyWolf *Remote, India*

- Developed 95% of *thelexicon.ai*, an AI article generator platform, using Next.js, Supabase, OpenAI, and Tailwind CSS
- Implemented subscription access with Dodo Payments and designed animated UI components with Framer Motion

Software Engineer Jan 2023 – Feb 2025

Digit Information & Software Technologies *Lagos, Nigeria*

- Built core modules of the company's main product, a hospital management system on local server architecture: patient records, pharmaceutical inventory, QR-coded bill generation, and doctor management
- Built a commerce platform frontend for web and mobile with API and payment gateway integration
- **Bellfast Services Ltd** (subcontract, Jul – Dec 2024): built the production backend for a fintech/marketplace platform, then re-architected it by moving off an over-provisioned VPS to lighter, right-sized infrastructure, optimizing backend functions to reduce response times, and adding Redis caching for frequently accessed data, cutting resource usage by 52% and operating costs by 90%
- **Consukon Limited** (subcontract, concurrent): led a 6-person frontend team on Konnect, a marketplace web app, through its restructure into a React Native mobile app; integrated third-party payment and logistics APIs

Frontend Engineer, Web3 Ecosystem Jun 2022 – Dec 2022

ECLA Ecosystem *Remote, USA*

- Built a Web3 super-app frontend (NFT marketplace, wallet, staking/exchange) in React with MetaMask/Phantom integration and ethers.js/web3.js contract calls
- Developed the Cyber Queens NFT marketplace for women's artwork, with minting and trading

Frontend Engineer Oct 2021 – Feb 2022

SQI College of ICT *Oyo, Nigeria*

- Mentored 300+ students in web development fundamentals (HTML, CSS, JavaScript) and ran workshops on responsive layouts and accessible design

UI/UX & Brand Designer Aug 2018 – Sept 2021

Independent *Remote*

- Delivered branding, UI/UX, and graphic design for startups (Figma, Adobe XD, Photoshop, Illustrator, After Effects, Blender), the foundation of my product-minded approach to engineering

Projects

Vantage | *Next, pgvector, polymarket, RAG, Neon*| live github Present

- intel terminal that pulls live Polymarket contracts, retrieves related news via embeddings + Google News/Wikipedia, and uses AI to score headlines into trading leans (Yes / No / Stay away)

Trendbit | *Next.js, Oxylabs, Clerk, PostHog* 2026

- Built a news aggregation system that collects, deduplicates, and organizes trending stories from multiple sources

Edger | *Next.js, TypeScript, Supabase, Clerk, GenAI* | live 2026

- Built a pre-trade analysis tool that calculates lot sizes and other risk metrics before a position is opened.

Subora | *React Native, Expo, Supabase, Clerk* | source 2026

- iOS/Android subscription tracker with spend totals and push renewal reminders.

Doc Text Editor | *Next.js, Clerk, Convex, Tiptap* | live github 2025

- Real-time collaborative editor inspired by Google Docs, with rich text and organization-based sharing.
